

REFTEST Release Notes:

V. 1.21. Release date 02.12.2009

- Added Output live test data on serial Interface. Data is updated on the RS232 interface every approximate 10 seconds. The serial output can be used by other systems that use the live test data from the RefTest.

V.1.20 Release date: 13.02.2007

- Increased capacity to 290 reefer containers
- Support for Daikin controller (recognized as ISO in previous version)
- The container list is now sorted alphabetically by container prefix. Within each prefix, containers are sorted numerically from low to high.
- Communication status now shown directly in container list
- When a container is selected in the "container details" view, the specific container is granted more priority on the powerline, allowing for faster data updates
- "Alarm" button now used to select containers with communication malfunctions
- It is now possible to delete container list and make a fast refresh
- An Advanced Prefix sorting now allows to group containers by the first numbers in the prefix list.
